# LIBRARY MANAGEMENT SYSTEM

by Shubham Parmar

# About me

I have completed my Bachelor of Computer Applications (BCA) from Parul University, Vadodara. During my academic journey, I worked with Python and explored various aspects of data manipulation, which sparked my interest in the field of Data Science. This curiosity led me to pursue further learning and hands-on projects in data analysis and visualization.

Here are my professional profiles for reference:

# OBJECTIVE AND PROBLEM STATEMENT

To design and analyze a Library Management System database that tracks book inventory, loans, and branch activity, and to extract insights using SQL and Python visualizations for better decision-making.

tbl\_book

How many copies of the book titled "The Lost Tribe" are owned by the library branch whose name is "Sharpstown"?

```
SELECT bk.book_title , lb.library_branch_BranchName , count(*) no_of_copies
FROM tbl_book bk
JOIN
tbl_book_copies bc
ON bk.book_BookId = bc.book_copies_BookID
JOIN
tbl_library_branch lb
ON lb.library_branch_BranchID = bc.book_copies_BranchID
WHERE bk.book_Title =
    (SELECT book_Title FROM tbl_book
     WHERE book_Title = 'The Lost Tribe')
AND lb.library_branch_BranchName =
    (SELECT library_branch_BranchName FROM tbl_library_branch
     WHERE library_branch_BranchName = 'Sharpstown')
GROUP BY bk.book_Title , lb.library_branch_BranchName;
```

## OUTPUT :

book_title	library_branch_BranchName	no_of_copies
The Lost Tribe	Sharpstown	1

## OBSERVATION :

- Branch Sharpstown with the book title The Lost Tribe has only 1 copy.

How many copies of the book titled "The Lost Tribe" are owned by each library branch?

```
SELECT lb.library_branch_BranchName , count(*) no_of_copies
FROM tbl_book bk
JOIN
tbl_book_copies bc
ON bk.book_BookId = bc.book_copies_BookID
JOIN
tbl_library_branch lb

WHERE bk.book_Title =
      (SELECT book_Title FROM tbl_book
       WHERE book_Title = 'The Lost Tribe')
GROUP BY lb.library_branch_BranchName;
```

## OUTPUT :

library_branch_BranchName	no_of_copies
Sharpstown	1
Central	1
Saline	1
Ann Arbor	1

## OBSERVATION :

- Each library branch holds only one copy of the book titled The Lost Tribe

Retrieve the names of all borrowers who do not have any books checked out.

```
SELECT borrower_BorrowerName
FROM
tbl_borrower
WHERE borrower_CardNo NOT IN
    (SELECT
    DISTINCT book_loans_CardNo
    FROM tbl_book_loans);
```

**OUTPUT :**

borrower_BorrowerName
Jane Smith

**OBSERVATION :**

- Jane Smith has not borrowed any books to date.

For each book that is loaned out from the "Sharpstown" branch and whose DueDate is 3/2/18 , retrieve the book title, the borrower's name, and the borrower's address.

```
SELECT bk.book_Title , br.borrower_BorrowerName , br.borrower_BorrowerAddress
FROM tbl_book_loans bl
JOIN
tbl_library_branch lb

ON bl.book_loans_CardNo = br.borrower_CardNo
WHERE
lb.library_branch_BranchName = 'Sharpstown'
AND
bl.DueDate = '2018-02-03';
```

## OBSERVATION :

- Tom Li has only purchased from branch Sharpstown on duedate 3/2/18

## OUTPUT :

# TOP 5 Most Popular Books Loaned By Branch

# Final Business Insights

## High Loan Activity in January 2018

- Most book loans occurred in January 2018, suggesting a strong seasonal borrowing pattern aligned with academic or calendar cycles.

## Loan Activity is Inconsistent Across Months

- Post-January months like February 2019 show low engagement, possibly due to operational changes, data gaps, or lack of new inventory.

## Branch-Wise Performance Varies

- Certain branches like Ann Arbor consistently show higher loan volumes, while others like Sharpstown , Central or Saline remain underutilized.

# CONCLUSION

This project analyzed a library management database using SQL and Python to uncover patterns in book loans, branch activity, and author popularity. Key insights like seasonal borrowing trends and branch-wise performance helped identify areas for inventory optimization and improved user engagement.

# CHALLENGES

- While importing data into the tbl\_book\_loans table, the DateOut and DueDate columns failed to import due to inconsistent date formats (e.g., MM/DD/YY). To resolve this, I initially changed the column data type to VARCHAR to allow successful import of raw date strings.
- After importing the data, I used the STR\_TO\_DATE() function in MySQL to convert the string values into proper DATE format and stored them in new DATE columns.
- And some difficulties faced while merging two or more tables using JOIN .
